Learning, which originates in a desire for knowledge, has always been fundamental in the shaping of social life. It has lost nothing of its importance with developments in technology. Under the influence of Information Technology (IT), learning has acquired new dimensions, discussed quite regularly on many levels.

The aim of this conference is to discuss future innovations in the field of learning. The conference will encourage a debate on strategies for the development of the most effective methods, techniques, and technologies that will serve humankind in the lifelong learning process. Human beings are, after all, centrally involved in learning, and its fundamental "raison d'être". This year, to be different from other years, the special theme of the conference has been selected as "**Digital Transformation in Education**". We are therefore calling for contributions (research papers* and posters) focusing on "Digital Transformation in Education", and examining the following issues through original research and exploration. "Best Practices in Education" session, in which good examples of education and training activities supported by various institutions / organizations will be presented, will also be organized in order to contribute to the development of new practices that will model these best examples.
