

Gravitational waves: Some geometric properties

Anna Maria Candela

Department of Mathematics, University of Bari Aldo Moro, Italy

`annamaria.candela@uniba.it`

Since 1974, many times indirect proofs of the existence of gravitational waves have been given but only in September 2015 physicists gave the official announcement that gravitational waves exist.

Anyway, from a mathematical point of view, they have always been “real objects” and their geometric properties such as geodesic connectedness and geodesic completeness have been investigated.
