

Frontend Developer - R&D

You will be a part of one of the biggest teams in Intelligent Application development.

Are you looking for a work environment to improve your technical skills? Do you want to have experience in a global delivery project by using Java programming languages? Do you want to work in a project with Agile practices and Agile project life cycle? This job is a good opportunity to improve your skills and grow your career path as a Software Development Engineer.

Responsibilities

- 1. Participate in the **front-end development** of key cloud service H5.
- 2. Maintain key features, including UX experience, functions, and H5 front-end component abstraction.
- 3. Develop versions and features based on product requirements and perform iterative evolution.

Position Requirements:

- 1. Major in computer/software engineering/mathematics, familiar with Git.
- 2. Native or fluent in **English**.
- 2. Proficient in **HTML, CSS, and JavaScript**, and have experience in mobile Internet product R&D, such as web app and H5 development.
- 3. Have a proficient command of the JavaScript object-oriented mechanism. Be able to use native JavaScript to perform DOM programming. Have a basic command of common JavaScript libraries or frameworks (such as prototype, React, and Vue) in the industry. Have a basic command of front-end engineering solutions.
- 4. Being familiar with server-side rendering, to have participated in the development of large-scale H5 mobile client projects, and be familiar with frameworks such as Nginx, Flask, and Jinja is **preferable**.
- 5. Quick-thinking, sensitive to new technologies, and good at studying and learning.
- 6. Good communication and teamwork capabilities, strong problem analysis and resolution capabilities, good code cleanliness, and willingness to dig into the root causes of problems.
